

WoolGuard

HOOD FILTERS

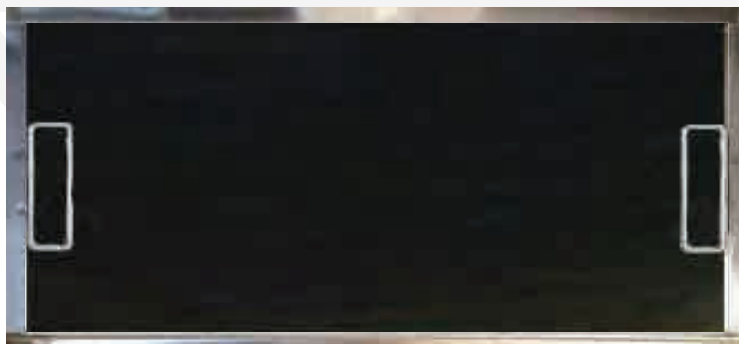

Lifecycle Stages of a WoolGuard Hood Filter

Filters are starting to show grease accumulation. Notice the "ribs" of the baffle filter becoming visible.

Filter becomes darker as it captures more grease.

The "ribs" are no longer visible. This filter needs to be replaced.

HOOD FILTERS

Change-out Filter in 5 Steps

Step 1 Remove Frame

Grip the handles firmly to safely remove the filter from the hood.

Step 2 Separate Frame

Grab one handle and the back of the frame and pull to separate the components.

Step 3 Dispose Filter

Dispose of used filter in standard trash. Wool is biodegradable, there is no special disposal required.

Step 4 Install New Filter

Place a new filter on top of the frame and then "snap" the cover in place by lining up the nipples and dimples on the sides of the filter.

Step 5 Re-Install Baffle

Using the handles, place the filter back into your system. Make sure the handles are on the sides (not top/bottom).
